Let's ask Google!

Making data work for you

Use data to better describe the present or better predict the future

What can data do?

- Describe the current state of an organization or process
- Detect anomalous events
- Diagnose the causes of events and behaviors
- Predict future events

What do we need for machine learning?

- A well-defined question
 - *"What is the probability that this transaction is fraudulent?"*
- A set of example data
 - *Old transactions labeled as "fraudulent" or "valid"*
- A new set of data to use our algorithm on
 - *New credit card transactions*

Case study: smart watch

Internet of Things (IoT)

Refers to gadgets that aren't standard computers

- Smart watches
- Internet-connected home security systems
- Electronic toll collection systems
- Building energy management systems
- Much, much more!
